Managing Pain: Moving Beyond Opioids

Most people experience some kind of pain during their lives. Pain serves an important purpose: it warns the body when it's in danger. Think of when your hand touches a hot stove. But ongoing pain causes distress and affects quality of life. Pain is the number one reason people see a doctor.

A class of drugs called opioids is often used to treat pain. One reason, explains NIH pain expert Dr. Michael Oshinsky, is that opioids work well for many people. Opioids can stop the body from processing pain on many levels, from the skin to the brain. Because they work throughout the body, he says, "Opioids can be very effective for multiple types of pain."

But opioids also produce feelings of happiness and well-being. And they're reinforcing: the more people take them, the more they crave them. This can lead to addiction, or continuing to take opioids despite negative consequences. Scientists have not yet been able to develop opioids that reduce pain without producing these addicting effects, Oshinsky explains.

The longer someone takes opioids, the more they may need to take to get the same effect. This is called tolerance. Having a high tolerance doesn't always mean you'll become addicted. But taking higher doses of opioids increases the risk for both addiction and overdose.

The U.S. is now in the grip of an opioid crisis. Every day, more than 100 Americans die from an opioid overdose. This number includes deaths from prescription opioids.

"We don't need 'better' opioids. We need to move away from the reliance on opioids for developing pain treatments," Oshinsky says.

About the NIH HEAL Initiative

In April 2018, NIH launched the HEAL (Helping to End Addiction Long-termSM) Initiative, an aggressive, trans-agency effort to speed scientific solutions to stem the national opioid public health crisis. This Initiative will build on extensive, well-established NIH research, including basic science of the complex neurological pathways involved in pain and addiction, implementation science to develop and test treatment models, and research to integrate behavioral interventions with Medication-Assisted Treatment (MAT) for opioid use disorder (OUD). Successes from this research include the development of the nasal form of naloxone, the most commonly used nasal spray for reversing opioid overdose, the development of buprenorphine for the treatment of OUD, and evidence for the use of nondrug and mind/body techniques such as yoga, tai chi, acupuncture, and mindfulness meditation to help patients control and manage pain.

Over the past year, NIH has worked with experts from public and private organizations to identify the areas that would most benefit from focused efforts by NIH alone or in partnership with outside organizations.

The NIH HEAL Initiative will bolster research across NIH to improve treatments for opioid misuse and addiction and enhance pain management.

www.nih.gov

NIH is funding research into new and more precise ways to treat pain. It's also working to develop new treatments to combat opioid misuse and addiction.

Opioids Not Always Needed

Opioids are often prescribed for acute pain. Acute pain is short-term pain, the kind experienced after an accident or an operation. But other drugs may be just as effective for acute pain, even after surgery, explains Dr. Dena Fischer, a dental health expert at NIH. Some of these drugs, like acetaminophen or ibuprofen, don't require a prescription.

People may think that prescription drugs work better for acute pain. But that's often not the case, Fischer says. Using something other than an opioid first can be especially important to manage acute pain in fields such as dentistry, she adds.

Many people receiving opioid prescriptions from dentists are teens or young adults who have never been prescribed an opioid before.

"Research is starting to tell us that people who receive an opioid prescription as a teenager have a tendency to continue to take

opioids for non-medical purposes in the long term," Fischer says.

Healthcare providers who decide their patient needs an opioid are now being encouraged to give only a few pills at a time. People who receive shorter prescriptions are less likely to misuse their pills by taking more than prescribed or taking them after the pain is gone. This also cuts down the chance that the pills could be taken by others.

When Pain Is Chronic

Managing chronic pain is more complicated than treating acute pain. More than 25 million people in the U.S. alone live with chronic pain, which is pain that lasts more than three months.

Many things can cause chronic pain. For example, Oshinsky says, a muscle that was damaged in an accident may heal relatively quickly. But if a nerve was also hurt, it can continue to send pain signals long after the body has repaired the muscle.

Other types of chronic pain are driven by brain changes, explains Dr. David Williams, an NIH-funded pain researcher at the University of Michigan. When these changes happen, the brain continues to

perceive pain even though the injury has healed.

For people with this type of chronic pain, sometimes called central pain, opioids and some other kinds of pain medications can actually make the pain worse.

Research has shown that talk therapies, such as cognitive behavioral therapy, can help many people with chronic central pain. These types of therapies “emphasize behaving in different ways or thinking in different ways that alter the perception of pain,” Williams explains. “Pain is a combination of a sensory and an emotional experience.”

Cognitive behavioral therapy can also help people with chronic pain manage related health problems, such as problems sleeping, feeling tired, or trouble concentrating. This can increase quality of life for people with chronic pain. It can also have overlapping effects.

“Pain processing and sleep and thinking and mood all share the same neurotransmitters in the brain,”

Williams says. “So, by improving something like sleep, you’re also improving pain.”

Non-opioid drugs can help some people with chronic pain too, Oshinsky says. Many of these drugs were first developed to treat different health conditions, such as seizures, depression, or anxiety. But they can also change the way the brain processes pain. Some people benefit from devices that stimulate the nerves directly to block pain signals from reaching the brain, Oshinsky adds. Different devices can work on different parts of the nervous system, from the nerves in the skin to the spinal cord.

People with certain types of pain have also been shown to benefit from exercise, acupuncture, massage therapy, or yoga.

Expanding the Options

The alternatives to opioids we have now don’t work for everyone’s pain. More non-opioid, non-addictive treatment options could help reduce the number of opioids prescribed each year.

Recently, NIH launched the Helping to End Addiction Long-Term (HEAL) Initiative to address the shortage of effective medications for chronic pain and other issues contributing to the opioid crisis.

Some of the research funded by HEAL will focus on understanding how chronic pain develops. A better understanding of how acute pain becomes chronic could reveal new treatment targets.

Researchers funded by HEAL also hope to learn how to predict who will develop chronic pain from acute pain. This information could be used to guide early pain management, Oshinsky explains. HEAL will fund research into new treatments for opioid misuse and addiction as well.

Dealing Safely With Pain

Things you can do if you’re prescribed an opioid:

- Ask if there are ways besides opioids to relieve your pain.
- Make sure your healthcare provider knows about all other medications you are taking.
- Let your healthcare provider know if you or others in your family have had any problems with addiction, such as with alcohol, prescription medications, or illicit drugs.
- Ask about the risks of taking an opioid.
- Ask how to take the opioid and how long you should take it.
- Never use alcohol when taking an opioid.
- Store opioids in a safe place out of sight and out of reach of children, preferably in a locked cabinet.
- Dispose of leftover prescription medicine quickly and properly.

How to Pick the Best Cereal for Your Weight Loss Goals

When faced with a hectic morning, the easiest path to breakfast often includes a cereal box. Open. Pour. Add milk. Eat. But, when it comes to nutrition, the choices in the cereal aisle don't stack up evenly. Varieties with chocolate chips and marshmallows likely stand out as the unhealthier of choices, but seemingly healthy options, such as some granolas and sweetened whole-grain varieties, can be packed with added sugars and unhealthy fats, too — not to mention they can be seriously lacking in good-for-you nutrients.

"Never judge a cereal by the front of the box; the manufacturers aren't there to help you be healthy," says Gretchen Spetz, RD, a clinical dietitian with University Hospitals Cleveland Medical Center in Ohio. To get the real scoop, you need to scan the ingredients and nutrition facts label for sneaky sugar sources and hidden processed ingredients. What you do want to see are ingredients like whole grains, oats, whole wheat, and brown rice, which tend to be higher in fiber than more processed carbohydrates.

The good news is that the right cereal pick made with the right ingredients can serve up a healthy, nutrient-rich breakfast in a flash — and yes, help you meet your weight loss or weight maintenance goals.

To make the right decision when it comes to your breakfast bowl, Spetz recommends looking for cereals with at least 3 grams (g) of fiber (5 g or more is considered "high-fiber"), less than 10 g of sugar, and less than 200 milligrams (mg) of salt per serving.

Examples include:

- Kashi 7 Whole Grain Nuggets
- Kellogg's Bite Size Unfrosted Mini-Wheats
- Kashi GoLean
- Kellogg's All-Bran
- Post Shredded Wheat 'n Bran
- General Mills Cheerios
- General Mills Fiber One Original

NOTICE OF ANNUAL MEETING OF MEMBERS

The Annual Meeting of the Members of the Universal Trucking Benefits Association will be held at 16476 Wild Horse Creek Road, Chesterfield, Missouri, on Wednesday, April 17, 2019 at 10:30 a.m. (CST) for election of Directors and for the transaction of such other business as may properly come before the meeting and any adjournment thereof.

The above notice is given pursuant to the By-Laws of the Association.

PROXY

Universal Trucking Benefits Association

April 17, 2019 Annual Meeting of Members

THIS PROXY IS SOLICITED ON BEHALF OF

UNIVERSAL TRUCKING BENEFITS ASSOCIATION

The undersigned member of the Universal Trucking Benefits Association does hereby constitute and appoint the President of the Universal Trucking Benefits Association the true and lawful attorney(s) of the undersigned with full power of substitution, to appear and act as the proxy or proxies of the undersigned at the Annual Meeting of the Members of the Universal Trucking Benefits Association and at any and all adjournments thereof, and to vote for and in the name, place and stead of the undersigned, as fully as the undersigned might or could do if personally present, as set forth below:

1. FOR [], or to [] WITHHOLD AUTHORITY to vote for, the following nominees for Board of Directors: Al Gentile, Adam Mercer, and Judith Bausch
2. In their discretion, the proxies are authorized to vote upon such other business as may properly come before the Meeting.

This proxy, when properly executed, will be voted in the manner directed by the undersigned member. If no direction is made, this proxy will be voted for the election of directors and officers.

DATED: _____, 2019.

Signature _____

Name (please print) _____

Please date and sign and return promptly to 16476 Wild Horse Creek Road, Chesterfield, Missouri 63017 whether or not you expect to attend this meeting. The Proxy is revocable and will not affect your right to vote in person in the event that you attend the meeting.

UTBA Member Benefits

Spotlight on DCCU, AeroFlow, and UCT

As a member of UTBA, you are eligible for membership at Delta Community Credit Union (DCCU). Discover the credit union difference and enjoy a full range of premium financial products and services, including:

- Competitively Priced Loan Rates
- No-Fee, Interest Bearing Checking
- Outstanding Mortgages and Home Equity Loans
- State-of-the-Art Online Home Banking
- Car, Personal and Student Loans
- Full Service Branch Locations in Atlanta
- Dividend Earning Savings, Money Market and CDs
- 57,000+ Surcharge Free ATM's Nationwide
- Visa® Check/ATM Card and Credit Cards
- Reward Program for Visa Check/Credit Card Purchases
- IRAs and Coverdell Savings Accounts
- Sandy Savers Club Accounts for Children
- Delta Community Credit Union Investment & Insurance Services

For more information on credit union membership, call Delta Community Credit Union at **404-715-4725** or **toll-free at 800-544-3328**. Mention UTBA when you call.

UTBA members come to any of the Urgent Care Travel (UCT) clinics for a no-cost consultation to help them prepare for their next DOT Physical and see how the UCT Truckers Health Coaches can help them. Visit www.urgentcaretravel.com for locations and **provide Reference Code UTBA0319**.

Call UTBA at 877-472-5541 to see if your trucking company offers a UCT plan for you to enroll in for unlimited walk-in visits with no copays or deductibles. Plans include DOT physicals, drug screenings, primary care services, personalized care plans, and in-clinic lab services.

The AeroFlow Sleep Apnea Discount Program offers UTBA Members:

- Reduced testing fees
- Treatment discounts
- Compliance Management and 24-hour Support line
- Tests shipped to patient via UPS and can be completed in-truck or at-home for convenience

Contact AeroFlow at 866-650-7508 or go online at www.aeroflowindustrialclinics.com.

REMEMBER!

UTBA members also have access to group-rated insurance plans. Call 877-472-5541 for questions or to enroll right over the phone. Plan availability may vary by trucking carrier.

- **LIFE** - Does anyone rely on you and your income? Secure your family's future by enrolling in universal or term life insurance that will pay benefits to your loved ones in case of a catastrophe.
- **DISABILITY** - Protect your paycheck! In case of sickness or an off-the-job accident, disability coverage pays you a monthly income while you are out of work to help keep you financially afloat (i.e. pay your truck payment, cover your groceries, pay your utility bills, etc.)
- **MORE** – Dental, Vision, Critical Illness, Accident, Legal, Limited Benefit Medical plans may also be available. Call UTBA at 877-472-5541 to check eligibility.

**Membership Services Office
16476 Wild Horse Creek Road
Chesterfield, MO 63017**
